# Japan is drafting AI Basic Plan to support Japan AI Act

**Yuito Takizawa** Monday at 10:57 AM

N03. Japan Launches AI Strategy Headquarters to Formulate Basic Plan [#Japan] (.yt) (#sg08\_f25)

## Summary

On September 12, 2025, the Japanese government held the first meeting of its newly established "Artificial Intelligence Strategy Headquarters." This body will function as the central command for national AI policy. Its primary objective is to formulate a basic AI plan that encompasses R&D, promotion of AI utilization, and strategies for addressing associated risks. The government has stated its ambition to make Japan the "most AI-friendly country in the world" for development and application.

## Analysis

The direct leadership of the Prime Minister and the inclusion of all cabinet ministers underscores AI's elevation to a top-tier national priority, integral to industrial competitiveness and national security. The four-pillar framework indicates a comprehensive strategy that balances aggressive industrial promotion ('Using AI', 'Creating AI') with essential governance and societal safeguards ('Enhancing Reliability', 'Collaborating with AI').

## CAIDP Relevance

For CAIDP, the development of guidelines under the third pillar is a key area to watch, as it will define how Japan protects rights and interests while pursuing its pro-innovation agenda.

# Peru approves AI Law

 **Arianna Valentini** Monday at 11:08 AM     

**N01. Peru publishes National AI Law to promote economic and social development.**  
[#Peru] (.av) (#sg-15-f25)

On September 10th, the Government of Peru has approved the Regulation for Law No. 31814, which promotes the use of artificial intelligence (AI) to drive the country's economic and social development. The regulation establishes the *Secretaría de Gobierno y Transformación Digital* (SGTD) under the PCM as the technical-normative authority responsible for oversight, defining standards, guidelines, and good practices to ensure safe, ethical, and responsible use of AI.

It mandates the incorporation of AI education across all levels, supports teacher training, research labs, and innovation hubs; and introduces algorithmic transparency, human supervision in high-risk systems, and protections against misuse including discrimination, mass surveillance, or manipulation. The regulation also promotes experimentation environments for startups, micro-enterprises, public sector entities, academia, with participation from private sector and civil society.

This regulation represents a significant step toward establishing a governance framework for artificial intelligence (AI), setting ethical principles, supervisory roles, and rules for high-risk uses while promoting AI education and entrepreneurship. However, it has critical weaknesses: it lacks its own enforcement and sanction mechanisms, relying on existing institutions with limited capacity; it uses vague definitions of what constitutes "high-risk" or "misuse," creating room for legal uncertainty; and it risks placing heavy

# Colombia to fast track its AI Act

 **María Serrano** Monday at 11:10 AM 

**N01. Colombia's President compels Congress to "fast-track" the AI Bill [#CO](.ms)(#sg-11-f25)**

**Summary**

Colombia's President, Gustavo Petro, compels Congress to fast-track the Artificial Intelligence Bill, which seeks to establish a modern regulatory framework ensuring transparency, responsibility, and human rights protection. Drafted by the Ministry of Science (MinCiencias), it classifies AI systems by risk, imposing stricter control on high-risk applications affecting life, health, or liberty. The Ministry of Science will act as a national AI authority, overseeing regulation, certification, and supervision. The proposal includes administrative, civil, criminal, and ethical responsibilities, aiming to foster innovation under ethical principles, and to position Colombia as a regional pioneer aligned with international standards. Fast-tracked, Congress must process it within thirty days per chamber, securing a timely and solid legal framework.

**Analysis**

Fast-tracking may give Colombia short-term legal clarity and strategic edge in AI governance. However, speed risks undermining sufficient deliberation and oversight, which paradoxically could weaken the very principles it seeks to protect and possibly limit the Bill's adaptability to a continuously evolving and highly complex field.

# Malaysia launches national AI framework

 **Saima Tariq** Monday at 12:16 PM

N02. Malaysia announces formal AI Nation Framework at ASEAN AI Malaysia Summit 2025 [#Malaysia] (.stk) (#sg05\_f25)

**Summary**

On September 11, 2025, Malaysia officially announced the AI Nation Framework during the ASEAN AI Malaysia Summit 2025. This government-led policy framework establishes five strategic pillars focused on AI governance, digital trust, workforce development, infrastructure, and investment facilitation. The framework provides a formal national policy roadmap to democratize AI, bolster digital inclusion, and foster public-private cooperation, backed by commitments to enforceable guidelines and regulatory oversight to ensure ethical and secure AI adoption across sectors.

**Analysis**

Malaysia's AI Nation Framework represents a significant policy milestone as an officially endorsed national strategy, marking a clear governmental commitment to AI governance with actionable pillars. Its emphasis on regulatory oversight and digital trust addresses key governance challenges, setting a national standard for equitable and responsible AI adoption. The integration of strategic investment and workforce policies illustrates a holistic government approach balancing innovation promotion with societal safeguards. This framework is a valuable case study for CAIDP on effective AI policy design in emerging markets.

## Center for AI and Digital Policy Statement to the UN General Assembly 2025

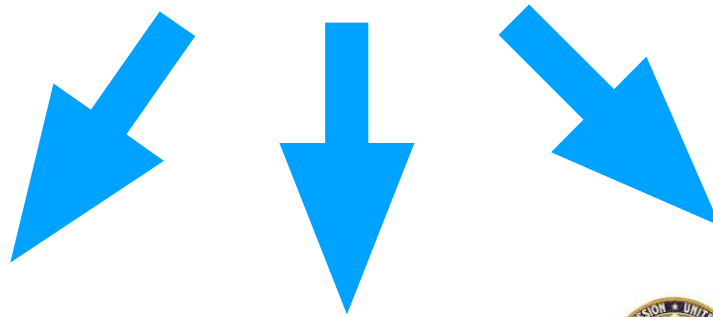

22 September 2025

Your Excellencies,  
Antonio Guterres, Secretary General  
Amandeep Gill, Under-Secretary-General and Special Envoy for Digital and Emerging Technologies, Office for Digital and Emerging Technologies

The **Center for AI and Digital Policy (CAIDP)** welcomes the opportunity to provide recommendations on AI policy for the 80<sup>th</sup> United Nations (UN) General Assembly. Over the last several years, CAIDP has worked closely with many UN agencies and institutions on the development of AI policy frameworks. We commend the continued progress of the UN toward an AI future that is inclusive, sustainable, and safeguards the rights of all.

## Statement attributable to the Spokesperson for the Secretary-General – on the General Assembly decision on new artificial intelligence governance mechanisms within the United Nations

Stéphane Dujarric, Spokesman for the Secretary-General

The Secretary-General warmly welcomes the General Assembly's decision to establish two new mechanisms within the United Nations to promote international cooperation on the governance of artificial intelligence (AI).

The establishment of the United Nations Independent International Scientific Panel on AI and the Global Dialogue on AI Governance marks a significant step forward in global efforts to harness the benefits of artificial intelligence while addressing its risks. This pathbreaking milestone underlines Member States' commitment to build on the Global Digital Compact adopted as part of the Pact for the Future in September 2024.

Re: *In the Matter of Workado, LLC, f/k/a Content at Scale AI*  
FTC File No. 232-3092

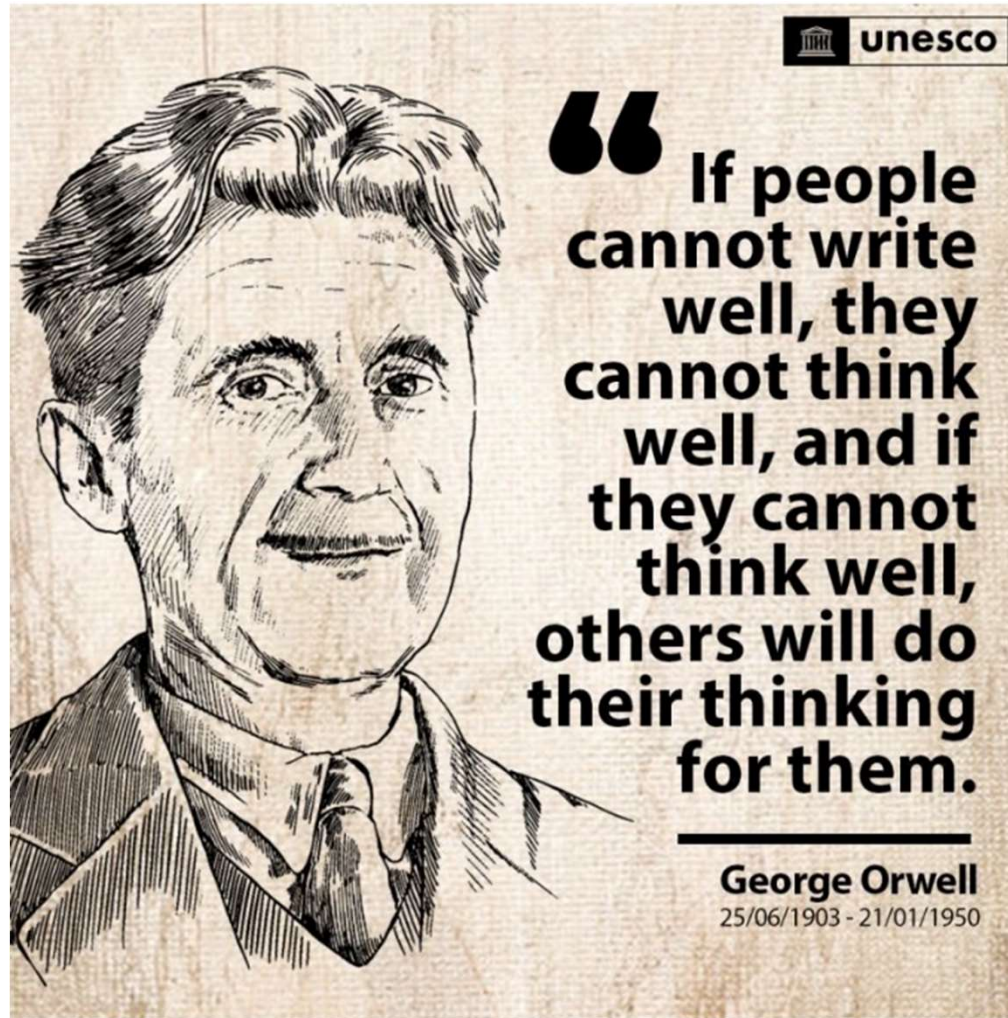

Dear CAIPD:

The Commission's analysis is aided by hearing from a variety of sources, and we appreciate your comment regarding the above-referenced matter. The Commission has placed your comment on the public record pursuant to Section 4.9(b)(6)(ii) of the Commission's Rules of Practice, 16 C.F.R. § 4.9(b)(6)(ii).

# Research Methods

# Communication is Critical

“ If people cannot write well, they cannot think well, and if they cannot think well, others will do their thinking for them.

George Orwell  
25/06/1903 - 21/01/1950

Center for AI and  
Digital Policy

# CAIDP Style Guide - Orwell's Advice

Avoid cliches.

Never use a long word where a short one will do.

If it is possible to cut a word out, always cut it out.

Never use the passive where you can use the active.

Never use a foreign phrase, a scientific word, or jargon if there is an everyday equivalent.

*Clear, consistent communications is critical for effective policy and advocacy*

# More Writing Tips

Write short, simple, declarative sentences

Excerpt original text where possible. Do not paraphrase.

Avoid compound modifiers, e.g. “promote and encourage.” Pick one

Avoid ambiguous pronoun references, e.g. “it” and “they.” Be precise

Use writing tools, such as Grammarly

**“Fewer words. More impact.”**

**QUESTION:**  
Why write short, simple sentences  
in AI policy statements?

# Terms to Avoid - “multistakeholder”

*Many policy debates are won or lost because one side is able to frame the debate with key terms that presuppose outcomes.*

Avoid “**multistakeholder**” which is often set out an alternative to actual democratic institutions.

★ Say “process for public participation” if there is opportunity for meaningful public participation and the expectation that there will be actual outcomes based on public input.

Note that CAIDP Public Voice page calls attention to meaningful opportunities for public participation

# Terms to Avoid - “platform”

Avoid “**platform**” which implies a high degree of neutrality that rarely exists in practice (most companies profile and target users based on their activities)

“platform” diminishes the agency (and reduces the liability) for the company offering the service.

★ Say “**company**,” “**corporation**,” “**business**,” or “**gatekeeper**” - if referring to one of companies which dominate the market / control access to essential tech services

# Terms to Avoid - “sharing”

Avoid “**sharing**” when describing the processing of personal data.  
Organizations do not “share” something that belongs to someone else.

Only the person to whom the data pertains may share their personal data

★ Say “**sell,**” “**transfer,**” “**release,**” or “**disclose.**”

# Terms to Avoid - “balancing”

Avoid “**balancing**” when discussing policy objectives

You might hear “we need to balance innovation and human rights.”

This is (1) a cliché, (2) reflects a fundamental misunderstanding of effective public policy, and (3) is lazy. Do not accept a zero-sum analysis.

Write “we should promote innovation AND protect fundamental rights.”

# Terms to Avoid - “democratizing”

“Democracy” is an arrangement of **political** institutions. Democracies requires the **rule of law** and the **protection of human rights**.

Technology does not “democratize.” Often, it has the opposite effect as preexisting democratic institutions are diminished with multi-stakeholder entities

Ok to say “popularize” or “promote public access.” For example, open source AI models do not “democratize” AI.

“Open source models promote public access to AI.”

# Terms to Avoid - “cookies”

For several reasons, the term “cookie” should not be used in tech policy. The main issues are that **it is an imprecise technical term, it is misleading and confusing to the public, and it fails to encompass the full scope of modern tracking technologies.** 

## The term is technically inaccurate

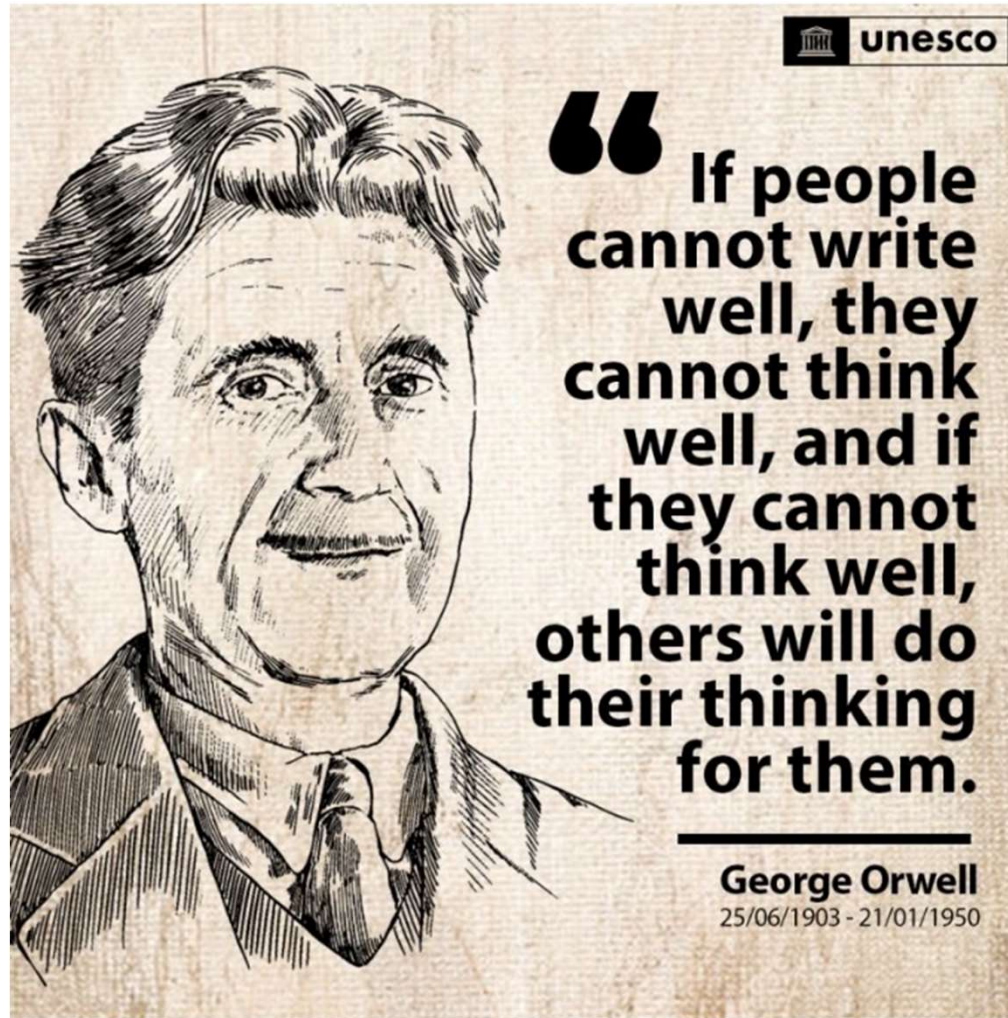

- **A “magic cookie” is outdated.** The term originated from “magic cookies” in Unix, which were packets of data exchanged by programs. The modern web cookie derived from this concept but has evolved far beyond it. Modern technology policy needs to move beyond this outdated and narrow term.
- **It excludes modern tracking methods.** Many current tracking techniques do not involve cookies. These include fingerprinting, unique device identifiers, pixels, tags, server-side tracking, and more. Policy that focuses solely on “cookies” is technologically obsolete and does not address these other methods.

## It is confusing and misleading to the public

- **The name is trivializing.** The name “cookie” is an informal, playful term that trivializes the serious privacy implications of data tracking. It gives the public a false sense of security, downplaying how their data is being collected and used.
- **It obscures data practices.** The language around cookie notices is often deliberately vague, making it difficult for the average person to understand what data is being collected, why, and by whom. The focus on the term “cookie” distracts from the actual data processing, consent, and user-profiling that are the true policy concerns.
- **It creates consent fatigue.** The constant repetition of “cookie” pop-ups and consent forms has led many users to reflexively click “accept,” undermining the entire purpose of informed consent. This manipulative practice, known as a “dark pattern,” exploits a term the public doesn’t fully understand. 

Ok to say “**persistent unique identifiers**” For example,  
“Do you accept your  
persistent unique identifiers  
to be collected by this  
website and be tracked?”

QUESTION:  
Why do we put such emphasis  
on word choice?

 unesco

“ If people cannot write well, they cannot think well, and if they cannot think well, others will do their thinking for them.

**George Orwell**  
25/06/1903 - 21/01/1950

Center for AI and  
Digital Policy

Critical *thinking* is the basis of  
meaningful communication

# Citations

Cite to primary sources.

Favor more recent publications over earlier publications

Do not restate in the text information that will be found in the citation,  
such as the date of publication, unless it is significant

# Primary Source is Paramount

A **primary source** is the origination point, eg the promulgation of a law, the publication of a report, the issuance of policy guidance

A **secondary source** reports on the primary source, eg a news article, or republishes from a primary source. But it is not the originating source.

A **tertiary source** is a chatbot output. It distills information from primary and secondary sources. Oftentimes, there will be links to the primary and secondary sources.

Secondary and tertiary sources can be helpful, but do not rely on them. Locate and cite the primary source and then make your own assessment.

# Style Variance

*In the policy world, different documents serve different purposes.*

The **CAIDP Index** is a scholarly publication. The tone should be objective, factual, and authoritative.

**CAIDP statements** are policy recommendations. The tone is persuasive, direct, and evidence-based. (Not simply opinion).

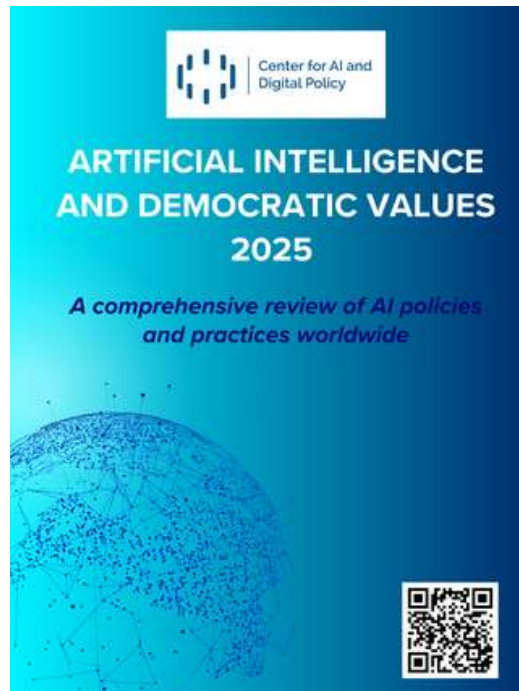

The **CAIDP Update** is journalism. The tone is engaging, informative, and timely.

Accuracy is always a necessity.

What would Orwell say about  
ChatGPT?  
(Answer in chat)

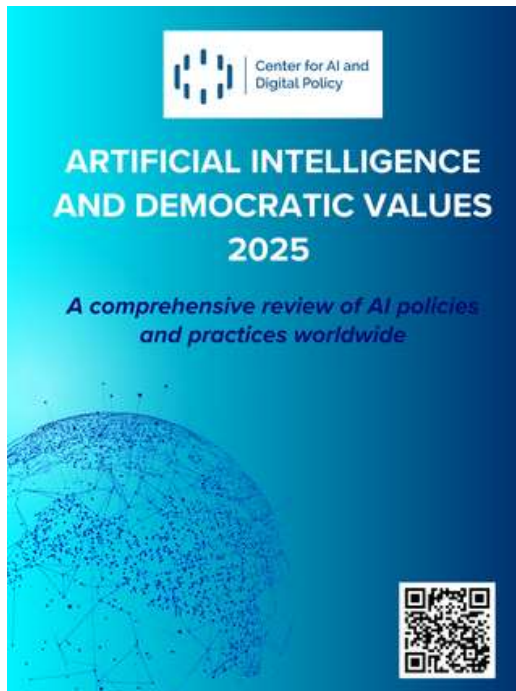

# Research Methods and CAIDP Index - *AI and Democratic Values*

## THE GOALS OF THE AIDV INDEX

- (1) Document AI policies and practices of countries,
- (2) Establish a methodology based on global norms,
- (3) Provide basis for comparative evaluation, and
- (4) Encourage countries to ensure that AI is trustworthy and human-centric

## CAIDP INDEX BY THE NUMBERS

80 detailed country reports

1,600+ pages

Approx 7,000 footnotes

1,000 researchers from over 120  
countries

*Most extensive comparative study of  
AI policies and practices in the world*

## *Examine a country report*

### Assess the writing style

Is it clear, well-written, and easily understood?

Is the tone objective, factual, and authoritative

### Assess the citation

Is it authoritative? A primary source?

Does a date appear? Does the link work?

In November 2020, the Nigerian government launched<sup>3685</sup> the country's first Artificial Intelligence and Robotics Centre in a bid to position the country for the Fourth Industrial Revolution that is anchored on emerging technologies. The Centre's focus is to serve as the digital laboratory for advancing skills development and innovation in emerging technologies with an emphasis on AI and the Internet of Things (IoT).

Earlier, Nigeria announced that it was working with the United Arab Emirates on Solar Energy and Artificial Intelligence<sup>3686</sup> after a meeting held in Nigeria between Nigeria's Minister of Science and Technology, and the Ambassador of the United Arab Emirates to Nigeria. The government announced that the National Agency for Science and Engineering Infrastructure would be responsible to develop AI in Nigeria. The government also established Nigeria's Robotics and Artificial Intelligence Centre.

Nigeria Communications Commission (NCC), the telecoms regulator, also announced the establishment of a new department on digital economy under the Office of the Executive Vice Chairman/CEO. The focus of the office is on implementing programs and policies aimed at fully supporting and promoting the national digital economy agenda of Nigeria's Federal Government. The department is domiciled under the office of the Chief Executive Officer to indicate the criticality of the objectives. Nigeria

 CAIDP Celebrates <<September 5>> "AI Governance Day" On September 5, 2024, the [Council of Europe](#) Framework Convention on Artificial Intelligence, Human Rights, Democracy, and the Rule of Law was open for signature. 42 countries have now endorsed the AI Treaty, the first legally binding convention for the governance of AI. 🍌 🍌

Just as the Council of Europe recognized <<January 28>> as global "Data Protection Day," celebrating the date when the original [Council of Europe](#) Privacy Convention was open for signature, the [Center for AI and Digital Policy](#) has designated <<September 5>> as "AI Governance Day"

In the next year, we will work to:

- 1 Encourage more countries to endorse the AI Treaty
- 2 Encourage countries that have endorsed the AI Treaty to ratify the Treaty so that it has legal force
- 3 Promptly implement and enforce the AI Treaty!

Join us as we work to safeguard human rights, democracy and the rule of law!

#### 🗣️ CAIDP Urges Bosnia and Herzegovina to Endore the International AI Treaty 🇧🇦

In a public statement, the [Center for AI and Digital Policy](#) (CAIDP) has respectfully urged the government of Bosnia and Herzegovina to sign and ratify the Council of Europe AI Treaty.

CAIDP has launched a global campaign for the Council of Europe AI Treaty. The Treaty is a landmark international agreement designed to safeguard human rights, democracy, and the rule of law. More than 42 nations have already signed this first internationally binding treaty for the governance of AI.

- ✅ Bosnia and Herzegovina developed a national strategy for digitalization and innovation in 2021, aligned with the EU and the UN Sustainable Development Goals.
- ✅ Bosnia and Herzegovina joined the Council of Europe in 2002 and has since signed or ratified 90 conventions, including the European Convention on Human Rights and the Istanbul Convention.
- ✅ The Council of Ministers has endorsed accession to the AI Treaty and tasked the Ministry for Human Rights and Refugees to sign the Convention.
- ✅ Bosnia and Herzegovina has partnered with the Council of Europe, UNDP, and other international organizations to advance digital transformation and AI capacity-building.
- ✅ Bosnia and Herzegovina participated in drafting the AI Treaty and conducted broad national consultations and impact assessments.

The AI Treaty makes clear that AI systems must comply with fundamental principles:

- Human dignity and individual autonomy
- Equality and non-discrimination
- Respect for privacy and data protection
- Transparency and oversight
- Accountability and responsibility
